DETAILED ACTION

1. The location and examiner of this application has changed. Please note changes below.
2. This action is in response to the papers filed June 19, 2001. Currently, claims 1, 69-109 are pending.
3. Applicant's have amended the claims to include sequences which were not previously searched, namely SEQ ID NO: 6-12. SEQ ID NO: 1-12 are independent and distinct.

Restriction Requirement:

4. Each sequence is patentably distinct because they are unrelated sequences, i.e. these sequences are unrelated because the protein encoded by these sequences differ in structure and in function and in biological activity. Further, even where the nucleic acid changes have no effect on protein structure or function, these sequences themselves represent allelic variations which have different diagnostic and therapeutic implications. A restriction is applied to each Group. For an elected Group drawn to amino acid sequences, the Applicants must further elect a single amino acid sequence. For an elected Group drawn to nucleotide sequences, the Applicants are permitted to elect a single nucleic acid sequences (See MPEP 803.04).

The claims contains six individual, independent and distinct nucleotide sequences in alternative form. Accordingly, these claims are subject to restriction under 35 U.S.C. 121 as outlined in 1192 O.G. 68 (November 19, 1996).

As provided on page 37 of the instant specification, SEQ ID NO: 1-2 are directed to a receptor recognition factor that is about 113 kD. SEQ ID NO: 3-4 are directed to a receptor recognition factor that is about 91 kD. SEQ ID NO: 5-6 are directed to a receptor recognition factor that is about 84 kD. SEQ ID NO: 7-8 are directed to a receptor recognition factor that is about 91 kD. (The specification refers to both the amino acid and nucleic acid as SEQ ID NO: 8, appropriate correction is requested). SEQ ID NO: 9-10 are directed to a different receptor recognition factor. SEQ ID NO: 11-12 are directed to a nucleic acid molecule encoding a different receptor recognition factor. Each of these sequences encode different proteins as exemplified by the different SEQ ID NO:s.

Nucleotide sequences encoding different proteins are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute independent and distinct inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide sequences are presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 et seq.

Applicant is required to select one of the individual sequences for examination. The search of the selected sequence may include the complements of the selected

Art Unit: 1655

sequences and, where appropriate, may include subsequences within the selected sequences (e.g., oligomeric probes and/or primers).

The instant claims are drawn to six nucleic acid sequences. These sequences are presumably patentably distinct sequences.

Should applicant traverse on the ground that the nucleic acids are not patentably distinct, applicant should submit evident or identify such evidence now of record showing the species to be obvious variant or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other inventions.
